

ECS Sealed Intraday Research Results

48-symbol manifest-verified paper research. Per-share shadow aggregates; not live results.

Breakout continuation

Window	Candidates	Target-first	Gross/share	Net/share	Verdict
Train Sep	15,779	22.33%	-28,373	-53,619	Rejected
Validation Oct	15,386	20.89%	-28,827	-53,660	Rejected
Untouched test Nov	15,112	19.44%	-28,723	-52,989	Rejected

Breakout retest

Window	Candidates	Target-first	Gross/share	Net/share	Verdict
Train Sep	7,304	20.06%	-13,426	-24,879	Rejected
Validation Oct	7,075	19.22%	-13,245	-24,462	Rejected
Untouched test Nov	7,162	16.14%	-14,103	-25,497	Rejected

Conclusion

Immediate adverse selection is the largest measured loss cohort. Both continuation hypotheses are rejected. Current work: frozen feature separability for volume ratio, breakout extension, VWAP distance and EMA slope; thresholds are trained only on September and applied unchanged to validation and untouched test.
